

THE STRENGTH OF THE MORTORQ[®] **SUPER** SPIRAL DRIVE SYSTEM WITH TAMPER RESISTENT FEATURE

The revolutionary **MORTORQ[®] SUPER** spiral drive system is now available with a tamper resistant recess, that can incorporate either a four wing or a three wing design. The driver bit tooling will **not** be available through any distributors.

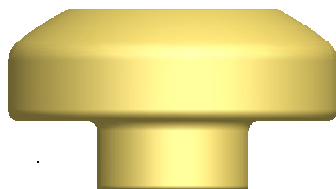

The four wing recess features a center post which requires a special driver bit in order to install or remove the fastener. This bit will only be available to the Original Equipment Manufacturer and to authorized service personnel.

The three wing recess and post design requires a special driver tool that is only available to the Original Equipment Manufacturer. Therefore, only the OEM will be able to service these tamper resistant fasteners.

The Mortorq[®] Super Tamper Resistant fasteners are available in various head styles.
